Benefits & Insurance Administration Manual (HR)

The admin playbook for the employee benefits stack: enrolment cycles, insurer claims escalation, vendor management and eligibility audits.

REF	KB-HR-12
VERSION	V2.0
EFFECTIVE	01 APR 2026
FOR	HR TEAM ONLY
CLASSIFICATION	CONFIDENTIAL / HR INTERNAL

This manual is for the benefits pod: how master data gets to insurers, how enrolment windows work, how claims escalate, and how vendors are managed. It complements (employee-side) the Group Health Insurance guide and the Benefits Overview.

1. Master data to insurer

- Monthly add / delete file (joins, dependants, exits) goes to the insurer on the 5th working day; acknowledgement tracked per employee id — never bulk-claimed as settled.
- Dependant records carry relationship codes from the insurer's sheet; designation-based personal email IDs are not member ids.
- Exits remove cover from LWD; the insurer's grace confirmations (if any) are recorded on the ticket rather than assumed.

2. Enrolment windows

Event	Window	HR action
New joiner elections	30 days from joining	Joiner audit at day 28 — personal reminders
Annual general window	April (announced)	Comm slips in employee portal; report of unchanged covers verified
Special (marriage / child)	30 days from the event	Verify documents, immediate update

3. Claims escalation ladder

TPA ticket numbers are mandatory from day one of attempting help; escalation beyond 10 working days or a second failed response goes: TPA account manager → insurer relationship manager → benefits pod lead takes it into a physical meeting. Employee communication states the facts and next review date, never speculation on outcomes.

4. Audit cadence

- Quarterly: eligibility reconciliations use payroll data vs insurer member list (active + dependants) — spurious members removed with letter trail.
- Renewal prep: 90 days before policy expiry, claims ratio and demographics go to finance for negotiation inputs.
- EAP usage: aggregate-only reporting to HR head with vendor; no individual counselling data is ever requested or accepted.

5. Employee experience standards

The benefits pod answers a benefits question in ordinary language, links the current plan sheet rather than paraphrasing it, and closes tickets with the exact next action and owner. Escalation by employees to the HR head happens when this standard is not met, and that feedback is treated as an input to the vendor review.
